Pre-school: Reggio Emilia Approach

Adhyayan preschool is inspired by the Reggio Emilia philosophy of education that originated in Northern Italy. It is a project based and inquiry based approach.

The Reggio Emilia philosophy is an approach to teaching, learning and advocacy for children. In its most basic form, it is a way of observing what children know, are curious about and what challenges them. Teachers record these observations to reflect on developmentally appropriate ways to help children expand their academic and social potentials. Long term projects connect core academic areas in and out of the classroom.

"The wider the range of possibilities we offer children, the more intense will be their motivations and the richer their experiences."

- LORIS MALAGUZZI

How Reggio Works?

The Reggio Emilia philosophy can be easily understood through three important concepts:

- Respect for the child
- Emphasis on building relationships
- The power of the learning environment

Each child is viewed as infinitely capable, creative and intelligent. The job of the teacher is to support these qualities and to challenge students in appropriate ways. Children are put at the center of the learning experience and are treated as the 'knowledge bearers'. This immerses them in the learning experience, and gives them ownership and space to develop their own love of learning.

Why Reggio Emilia

- Practical skills in the context of real world environments
- An environment that stimulates learning
- Outdoor education experiences
- Using 'play' to learn complicated concepts
- Connecting children to the greater community
- Developing positive social skills
- Intuitive insights into the needs of others
- Room for self-discovery
- Project based learning via long-term & short-term projects
- Incorporating different learning languages

Inquiry Based Learning

Inquiry-based learning resonates with the principles of child-directed and hands-on education. This method revolves around utilizing a child's curiosity as a foundation for projects. It entails presenting queries, challenges, or situations that prompt students to actively delve into, examine, and build their comprehension of the world.

Project-Based Learning

Short term/Long term Projects

Project-Based Learning (PBL) complements our preschool's Reggio Emilia Approach. Through real-world exploration and tailored projects, young learners gain diverse skills and knowledge. These engaging long and short term projects, reflecting children's interests, aim to enhance critical thinking, problem-solving, teamwork, and self-management for holistic development.

Integrated Curriculum / Emergent Curriculum

Adhyayan Preschool blends a responsive curriculum with Nepal's educational framework, prioritizing children's interests.

Aligned with the Reggio Emilia Approach, our curriculum integrates structured and spontaneous elements, promoting collaborative learning. Teachers weave children's interests into lessons while creating intentional experiences for exploration.
